Intern Assignment – Full-stack

Intern Full-stack Assignment – Practice Task (React Frontend + Express Backend)

🔍 **Purpose**

This task is designed to **evaluate your ability to build a complete small full-stack web app**, including frontend, backend, authentication flow, and basic UI layout.

We value:

- A **polished, complete user interface**
- **Clean, well-organized, readable code**

📘 **What You Need to Build**

A simple app with:

1. **Sign Up / Sign In** pages
2. A basic **Dashboard page** with layout
3. A working **JWT-based authentication system**

💻 **Frontend Stack**

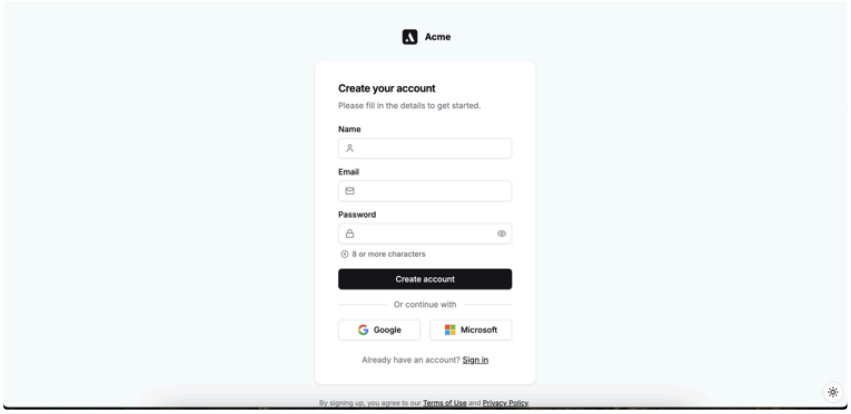
Please use:

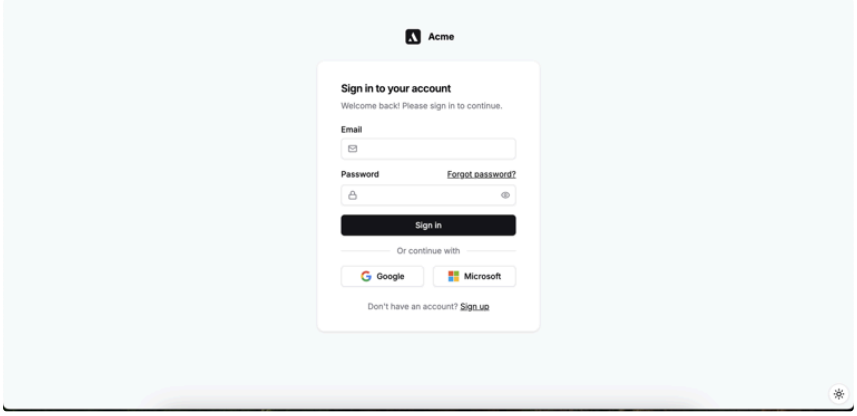
- **React** (preferably with Vite)
- **Tailwind CSS**
- **ShadCN UI** (for components)
- **React Hook Form + Zod** (for forms and validation)
- **Redux Toolkit** (for state management)

> ✅ *Bonus if you also use:*
>
> - **React Router** (for routing)
> - **TanStack Query** (for data fetching)

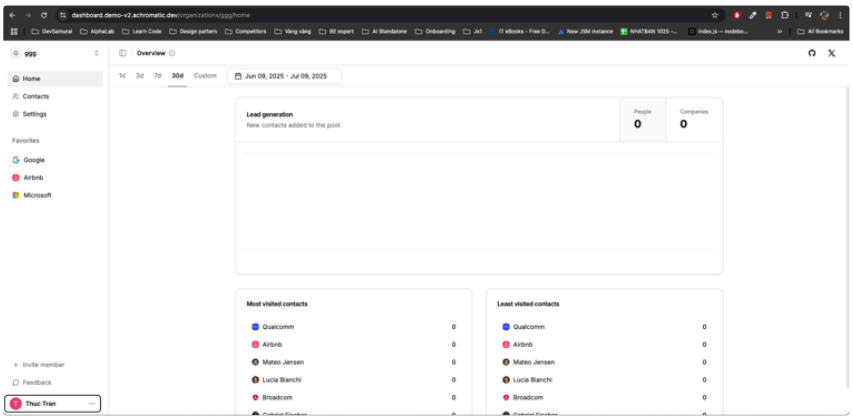
✨ **Frontend Features:**

- Sign Up / Sign In flow
  Example UI reference:





- Dashboard page
  Example UI reference:



- **Form validation** (e.g. email format, required fields)
- **Display errors** from backend responses
- **ShadCN components** for the UI
- **Protected dashboard** layout (only accessible after login)
- Show basic **user info** (e.g., name/email) in the sidebar or navbar
- Use **modular components** and **clean code structure**

🛠️ **Backend Stack**

Use **ExpressJS** with:

- **PostgreSQL**

- ORM: **Sequelize**

🔐 **Auth Flow:**

- Use **JWT** for authentication (access + optional refresh token)
- Store hashed passwords using **bcrypt**
- Provide these API endpoints:
  - `POST /auth/signup`
  - `POST /auth/login`
  - `GET /me` (protected route)

📦 **Database**

Create a basic `users` table or schema with fields:

- `id`, `name`, `email`, `passwordHash`, `createdAt`, `updatedAt`

✅ **Optional Enhancements**

- Use **TanStack Query** for data fetching
- Deploy your app (e.g. on Vercel, Railway, Render, Supabase)
- Add unit or integration tests
- Add `data-testid` to key buttons (e.g., `login-btn`, `create-btn`) to show test-readiness

---

📬 **Submission**

Please share a GitHub repository that includes:

- Clear commit history
- A `README.md` file with:
  - Setup instructions
  - Any assumptions or trade-offs made
  - Screenshots or a live demo link (if deployed)

❓ **Questions?**

If anything is unclear, feel free to ask during the assignment.
